

# PENDU SHINGLE BUGGY

## SPEED UP SHED PRODUCTION

The Pendu Shingle Buggy is the best way to get your workers and shingles to the top of the shed for installation. The Shingle Buggy runs on a Liquid Petroleum gas engine and is equipped with an air compressor for hooking up nail guns and other tools. The Shingle Buggy allows workers to quickly and easily move along the side of the shed and adjust the lift height to always be in a perfect position for shingle installation.

Visit our website for more info or call to talk about how our shed shingle buggy can help your operation!

718 North Shirk Road
